Abstract—The abstract goes here.
Keywords—keyword 1; keyword 2

I. INTRODUCTION

This demo file is intended to serve as a “starter file” for IEEE conference papers produced under L^AT_EX using IEEE-tran.cls version 1.8a and later. I wish you the best of success.

II. REFERENCE POINT ADAPTATION

some text

III. DYNAMIC MECHANISM

some text

A. reference point specification for optimal distribution

some text

B. reference point specification for fast convergence

IV. NEW MECHANISM

In this section, we will introduce a new mechanism that combines a weak convergence detection criterion. As we have explained before, a slightly larger r is suggested at the initial stage of the algorithms. But for well diversity at the final stage, it is needed to set r to its optimal value $(1 + 1/H)$. So

A. weak convergence detection
